TP5

SOFTTEST 5-LAYER TOUR BALL > MORE GREENSIDE CONTROL

NEW PERFORMANCE BENEFITS

- *Tighter Dispersion*
- *More Ball Speed and Distance*
- *Lower Ball Flight*
- *Lower Wedge Launch*

M1037901

M1039801

TECHNOLOGY

- **NEW Microcoating** – A more precise and controlled application of paint creates our most consistent outer layer. Microcoating limits paint pooling to maximize the aerodynamics of the dimple pattern. The new TP5 will have more repeatable flight and tighter dispersion.
- **NEW 5-Layer Construction** – Our largest core to date decreases contact time resulting in more energy retention and faster ball speeds on high swing-speed shots. New thinner mantle layers with new material compositions refine the speed gradient and fine tune spin throughout flight. A thinner more durable cast urethane cover pinches against the hardest outer mantle layer and the club face for high spin around the greens.
- **NEW Tour Flight Dimple Pattern** – Deeper dimple shape minimizes air turbulence optimizing the lift to drag ratio for a lower more penetrating ball flight. Improved dimple shaping eliminates ballooning for a more consistent and predictable ball flight.

TP5x

FASTEST 5-LAYER TOUR BALL > LOW DRIVER SPIN

NEW PERFORMANCE BENEFITS

- *Tighter Dispersion*
- *Our Fastest Ball*
- *Improved Feel*

M1047401

M1049101

TECHNOLOGY

- **NEW Microcoating** – A more precise and controlled application of paint creates our most consistent outer layer. Microcoating limits paint pooling to maximize the aerodynamics of the dimple pattern. The new TP5x will have a more repeatable ball flight and tighter dispersion.
- **NEW 5-Layer Construction** – A new core formulation increases core COR for more ball speed on high-speed shots. An increased speed gradient, through the use of new, firmer material composition, is designed to add ball speed while fine tuning spin throughout flight.
- **NEW Speed Wrapped Core** – New low density core controls sound that allows us to create a faster design.

THE MOST COMPLETE TOUR BALL > BETTER VISIBILITY

VISUAL PERFORMANCE BENEFITS

- *Easier Alignment*
- *Easier to Identify*
- *Immediate Putting Feedback*

M1040801

M1050101

TECHNOLOGY

- **Clearpath Alignment™** – A symmetrical diamond pattern design and balanced composition of high-contrast colors, generates easy to see feedback lines while putting. Paired with a long center line for easier alignment.
- **NEW Microcoating** – A precise process of controlling paint application for a more consistent outer layer. This more consistent coating allows the dimple pattern to maximize its performance and perform the same from shot to shot and ball to ball.
- **NEW 5-Layer Construction** – The re-engineered core, mantle, and cover layers are uniquely designed for each construction to maximize speed and flight performance. Golfers who value feel prefer the TP5, while those seeking workability choose the TP5x.

THE MOST COMPLETE TOUR BALL > BETTER ALIGNMENT

NEW VISUAL PERFORMANCE BENEFITS

- *New Thinner 360° Tour ClearPath Alignment™*
- *New Added Focus with Performance Dot for Quiet Eye*
- *Easier Alignment*

M1046001

M1055301

TECHNOLOGY

- **NEW 360° Tour ClearPath Alignment™** – A New 360° stripe design, focused on the better player, with tighter feedback lines and a less distracting pattern.
- **NEW Performance Dot for Quiet Eye Focus** – An added focal point helps train the gaze, sharpening situational awareness before initial movement improving performance on precision tasks.
- **NEW Microcoating** – A precision process of controlling paint application for a more consistent outer layer. This more consistent coating allows the dimple pattern to maximize its performance and perform the same from shot to shot and ball to ball.
- **NEW 5-Layer Construction** – The re-engineered core, mantle, and cover layers are uniquely designed for each construction to maximize speed and flight performance. Golfers who value feel prefer the TP5, while those seeking workability choose the TP5x.

M1079001 - TP5

M1079301 - TP5x

TECHNOLOGY

Radar Enabled Tracking Technology

- TP5 and TP5x TRK-R golf balls provide golfers an elevated level of accuracy with radar enabled tracking indoors.
- The inclusion of liquid silver printed in a nonsymmetrical infinity pattern inside the cover of TKR-R balls emits highly reflective waves that allows radar-based launch monitors, like Trackman, to accurately pick up ball spin.

FAQ

- Radar-based launch monitors can struggle to accurately measure data points indoors because they aren't able to capture a full rotation of the golf ball as it comes off the face before it hits the screen.
- TP5 and TP5x TRK-R golf balls are ideal for commercial indoor fitting facilities and hitting bays as well as in-home radar-based simulator setups (ie. Trackman and Full Swing Kit). Camera based simulators (ie. GCQuad and Full Swing Pro) will not see any benefits.
- Though TRK-R golf balls are designed for indoor use, they are USGA conforming and can be played in competition.
- TKR-R golf balls perform the same as non-TKR-R TP5 and TP5x golf balls due to the minimal amount of weight added by the silver print.
- Trackman certified
